FRAMEWORK FOR
DISCUSSION
THE NATURAL
LAW

WHAT IS NATURAL LAW & HOW IS THIS VIOLATED ?

PLANET ENGINEERING - WORLD LEADER BRIEF

"Most of the scientist generally believe that the "laws" of the nature are unbreakable, if we see something new, it just means our understanding of the law was incomplete. However that's not the case with Earth's Rising temp - I am reviving as "The Natural Law". Lets explore this journey with me as I hold your hand in to this profound truth about Planet & Humanity" - Rachna Sharma

Nature has its own cycles & intelligence of creation & destruction, she does its Job without wiping any species or damaging the planet. The Biggest super power nature has is its Natural Intelligence; a good example would be; "seed to a plant, tree, leaves & fruit.

Or a foetus to legs, arms, face, heart and eventually taking birth as a human baby.

In both examples and otherwise, energy is consumed, like in any industrial, infrastructure or other process. That is called carbon cycle of the nature. This energy consumption has a fixed amount of carbon which gets circulated on the carbon chain & passes through five elements of life. That is Natural Law.

In the present times, this natural intelligence system has been disrupted by humanity and we are very proud to be called disrupters. Post the second industrial revolution, till now in just 175 years we have produced so much carbon, which nature produces in Millions of years (last recorded data that planet saw was some 4.5 million years ago)

"So the natural law, means natural intelligence to sustain Life on the Planet and Violation of the natural law means we have disrupted that for our greed"

Keeping in mind that innovation is essential for development, here we need to remember, Innovation can also be sustainable if looked through the lens of Five Elements of Life.

How could have we done "Innovations " better or can still correct it and secured our future ? The Biggest question we have today is can we survive this century.

Earth has crossed 1.5 Degree Celsius, the Doomsday clock has been moved by scientist and its closer to 80 seconds to disaster, but world leaders are busy putting all energy in War Zones, still not awakening to the danger looming in front of them. So this was about The Natural Law.

We will talk about Earths Rising Temperature & how it impacts land, water & Higher Altitudes like the Himalayas differently.

(On Page 9 & 10)

HOW IS THE LENS "FIVE ELEMENTS OF LIFE" CONNECTED WITH THE NATURAL LAW - HOW DO WE BREAK THIS DOWN IN POLICIES & PROCESS OF THE PLANET AS HUMANITY LETS EXPLORE

In International Relations, World Politics & Political Philosophies, to many World Leaders, "Natural Law" will sound like a relic of Enlightenment philosophy or a footnote in a dusty legal textbook.

In reality, it is everything that life is made of, whether its you & me as humanity, animals, plants, forests or this planet itself.

All of this has natural carbon cycle, which serves as a bedrock upon which life is sustained.

In the Eternal Cosmic Order, its literally also positioned the way it should be

NA, Earth
MA, Water
SHI, Fire (Natural Earths Temp)
VA, Air
YA, Space / Sky

Self Explanatory, it was Earth, then society and at last Politics. Politics has evolved from Tribals to Kingdoms and Poltics. One thing that has remained is Earth and Humanity. Without both or any there will be no political system or governance system.

This Mantra (Code) was gifting to Humanity by the cosmic order, not as a religious mantra, but an eternal scientific code to sustain life on this planet.

However as we evolved, Humanity & Religion forgot this knowledge, left was only ritual and money making business of Temples calling it a religious mantra. Wherein Hinduism is a philosophy and not religion. This is a mantra (Code) for the World which serves as a reminder to sustain life on the planet.

It's actually how the World leaders were suppose to take care of planet.

So Lets explore further the scientific theories, data & statistics which backs my argument to be challenged in any Sustainability or World Peace Forum.

SHIVA HYPOTHESIS - THE LORD OF DESTRUCTION IN TRINITY OF BRAHMA THE CREATOR; VISHNU, THE PRESERVER; & MAHESH / SHIVA THE DESTROYER

WE HAVE DISRUPTED FIRE; ACTUALLY THE ETERNAL FIRE OF MOUNT MERU

This Natural Intelligence & Natural Law, NA MA SHI VA YA which we learn on first page can be proven with following summary;

At Phuro Innovations, our research has a unique focus on Ecological Peace. We don't just see a climate crisis; we see a fundamental crisis of being.

The data we analyze is clear: in just 175 years, we have released as much carbon into our atmosphere as the planet took 800,000 years to process.

This is not just a statistical anomaly.

It is a profound violation of a natural law.

This law is what the great scientists, like James Lovelock and Lynn Margulis, began to understand through their Gaia Hypothesis—the idea of Earth as a single, self-regulating organism.

It is also the very same universal principle you find in the Shiva Hypothesis, introduced by scientist William Napier & Victor Cube & climate hypothesis at Smithsonian Institute, which speaks about the natural carbon cycle of the earth, a balance we have dangerously disrupted.

And it is in our treatment of the five elements that we see our greatest conflict.

We have declared war on the Earth, turning its sacred ground into barren land. We have poisoned the Water that gives us life, filling our rivers and oceans with waste. We have abused the natural Fire of our planet, unleashing an imbalance of heat and chaos. We have polluted the very Air we breathe, compromising the breath of life itself.

This is a crisis of conscience. It is a sign that we have forgotten the true meaning of peace. Peace is not merely the absence of war, but the presence of harmony with everything around us.

This is not a time for polite conversation or cautious progress. The science is screaming, and the Earth is in its final warning. The diplomatic policies of the past have failed. They have delivered DELAY, not DELIVERANCE and the consequences are here.

We must now demand a new kind of leadership—a leadership that accepts accountability. This is not a negotiation; it is a matter of survival. It is time for every nation to step up, to stop hiding behind excuses, and to agree to an immediate, non-negotiable cap on carbon emissions. This is the only way to SAVE the PLANET.

BY THE NEW WORLD ORDER - NEW SCHOOL OF THOUGHT MUST BE ADOPTED

NATURE / GOD IS SUPREME

The Shiva Hypothesis warns that humanity has compressed millions of years of natural carbon accumulation into just 175 years, pushing current emissions to levels not seen for 4.5 million years.

There is fixed amount of carbon which is on planet which has its natural intelligent circulation, when we as humanity develop or innovate, it increases the carbon present in atmosphere and thus Rises the Earth's temp, pushing us in to Fire Age ... contrary to Ice Age. Ice can melt, and recreate life, Fire, can't regenerate, it only devastates. The planet would be Ashes, Five Elements of Life.

Essentially, the Earth acts like a giant "living" organism that actively corrects itself to ensure its own survival; says GAIA Hypothesis.

It also treats Planet earth as a living entity with a heart beat, hypothesis emphasizes that while nature has its own periodic cycles of destruction, current human activity—marked by massive contributions from nations like China (US 15 bn Tons) US (6 bn tons), India (3.5 bn tons), and the EU (3.4 bn tons)—is artificially accelerating this "Natural Law" toward a tipping point. And here China plans to peak its emissions in the coming decade pushing the entire planet in to Fire. That is a good example of why education is required specially at China level in South Asia.

The last window of negotiation between these Nations & Nature is open to save the planet. As a civilization we can not adopt to such terrifying change in Five Elements, we simply can't survive and have 80 % chances of extinction.

The further deep dive will simplify the complex intersection of philosophy and power politics, showing readers why the next era of diplomacy will be defined by who is held liable for the planet's "natural" state.

"NATURE / GOD IS SUPREME"

THE POLICY OF BALANCE

While the Five Elements NA MA SHI VA YA serves as a roadmap for ecological and personal balance. Let me also disclose the fact that planet has records of Five Ice Ages, there is no record of Fire Age; because its total destruction.

Hence this paper / publication / research / argument, is also serving as a serious warning to the sleeping World Leaders.

In this part of the World Fire is actually a taste of Eternal Fire - it's called Shiva's Trident.

I. The Policy of Balance (The Five Elements) - The Natural Law

We propose that "National Interest" be redefined through the lens of the Pancha Bhoota; Five Elements of Life. A state that violates the natural law of these elements creates its own eventual collapse.

- **Resource Sovereignty (Earth & Water):** Shift from extraction to regeneration. Treat soil health and water security as the primary pillars of national defense.
- **Energy Temperance (Fire):** Acknowledge that "Fire" (industrial energy) must be balanced. Unchecked thermal output (carbon) is an act of aggression against the global commons.
- **Atmospheric Integrity (Air):** Air knows no borders. Trans-national air quality agreements must be prioritized over short-term industrial gains.
- **The Global Commons (Space):** Protect the shared digital, physical, and orbital spaces from militarization to maintain the "Space" for diplomacy. Create a new Himalayan IGO & clean the space debris over Himalayas Immediately.

HIGHLIGHT - Ecological PEACE

Current global governance is reactive, treating symptoms like war and climate collapse as isolated incidents. This proposal advocates for a return to the "Eternal Order"—a systemic recognition that national security is impossible without ecological and social balance.

FIVE ELEMENTS OF LIFE

NA - EARTH

MA - WATER

SHI - FIRE

VA - AIR

YA - SPACE

The five syllables of "Na Ma Shi Va Ya" in the mantra "Om Namah Shivaya" represent one of the five elements Na is earth, ma is water, shi is fire, va is air, and ya is space. Any imbalance in them is called invitation to self destruction.

THE NATURAL LAW AUDIT PROPOSAL

III. Proposed Actions for Peace

To survive this century, we call upon Heads of State to implement three concrete shifts:

The "Natural Law" Audit: Every major piece of carbon emission must be vetted for its impact on the Five Elements along with its immediate corrective measures to avert Fire Age.

II. Vasudeva Kutumbakam: Diplomacy of Kinship

In a hyper-connected world, the "Zero-Sum" game is a suicide pact. If the World is One Family, then the "Law of Nature" dictates that "non compliance wound" by even one nation is bound to eventually infect these five elements again, hence a major World Movement is required by World Leaders.

From Competition to Co-prosperity: Moving beyond trade wars to "Family Economics," where the objective is the resilience of the global supply chain, not just the dominance of one link. World is one family and an intra dependence always helps in circular economy and cultural of peace around the world.

The Humility Mandate: Modern leadership often prioritizes dominance (Ego). In this new school of thought, wisdom suggests that the most sustainable power comes from Humility. A leader's legacy should be measured by the "Balance" they leave behind.

"The Law of Nature is Supreme. We have the power to change the world, India has a recorded history of being the seat of learning, the ancient texts had all the knowledge which our Researchers, Scientists and Gods gifted to humanity to use as per the need not want. The invasions, stole this knowledge but couldn't hold it, devastated the five elements in 175 years itself, and we see the devastation today. Let's acknowledge this paper as a guide to sustainability" - Rachna Sharma

GUIDE TO SUSTAINABILITY - INDIA

IMMEDIATE RISKS ...

The Global Threat Assessment;

Seismic Crisis: 61% of India is under active earthquake alert; current Himalayan disruption is a direct trigger for regional war on climate change. We propose a "NO Disruption zone" mandate & a new IGO for Himalayas immediately.

Climate Feedback: The "Third Pole" is melting and releasing methane at a rate visible on satellite-mapped thermal "red zones." This has to be immediately noted for correction.

The Proposed Solution - Strategic Action Required;

- **Industrial Pivot Transition** - China's manufacturing dominance from carbon-heavy industries to affordable Green Energy and solar grid stabilization for the global south.

While Climate Change is often debated through the lens of Carbon Credits and Transition costs, a new Philosophical shift is emerging: the application of "Natural Law" to International Relations.

This isn't just about ecology; it's about the legal and geopolitical framework for holding "the state accountable" for planetary degradation.

Read More on page 13 & 14

COMPLEX IDEAS SIMPLIFIED

Phuro Innovations connects ancient Vedic wisdom with modern science through two key ideas:

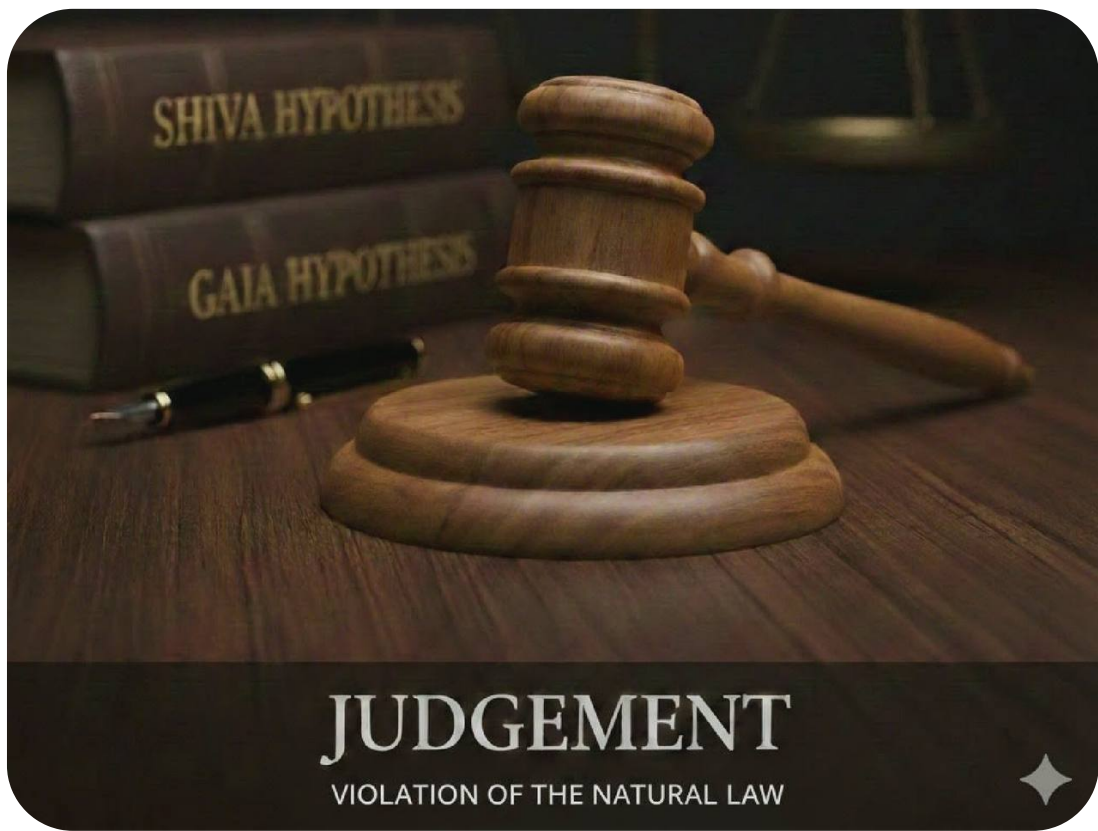

the Shiva Hypothesis, explaining natural carbon cycles and planetary renewal while highlighting how human actions disrupt this balance and the Gaia Hypothesis, which views Earth as a self-regulating organism.

Each of the five syllables NA - MA - SHI- VA - YA is traditionally linked to the five elements, Earth, Water, Fire, Air & Ether / Space. In Phuro's "Ecological Peace" framework, the warming Himalayas symbolize an imbalance in the "Fire" element.

Central to Phuro's mission, led by founder Rachna Sharma, are the Himalayas—seen not just as a mountain range but as a vital source of ecological peace.

Sharma urges turning this shared vulnerability into political unity, promoting transboundary cooperation on climate adaptation rather than border disputes. Sharma stresses that challenges like Glacial Lake Outburst, Floods and altered agriculture, demand leadership focused on biosphere protection.

Notably, the Himalayas are warming much faster than the global average, with high-altitude areas facing even greater temperature rises despite global efforts to limit warming to 1.5°C.

JUDGEMENT

VIOLATION OF THE NATURAL LAW

PHURO TIMES

WHY INDIA MUST ACT

The lack of accountability from Super Powers regarding the planet sends a troubling message, showing a focus only on territorial concerns while ignoring the complex connections between our universe, nature, food chain, and carbon cycle. Phuro Innovations urges the World Leaders, G4, & G7 to take lead and adopt the "The Natural Law Audit" in their present & future policies.

At Phuro, Our first goal is to be the Voice of the Voiceless—the Himalayas, the source of life and water systems. To begin with we propose the following Ecological Peace Framework as below.

This Ecological Peace framework proposes an intergovernmental organization for the Himalayas, creating a Non Disruptive Zone and we will explain in detail why

ECONOMIC CORRIDOR RISK ?

Phuro Innovations highlights a key philosophy in international relations: "GOD/ NATURE IS SUPREME," and he /she speaks via scriptures.

These ancient scriptures also call the **Himalayas the "Soul of Devas,"** underscoring the deep link between spirituality and our world. With rising carbon emissions and pollution from nuclear submarines and satellites in the Indian Ocean & skies, concern grows. About 1.9 billion people depend on rivers from the Hindu Kush Himalaya region, including the Kailash range, for drinking water, agriculture, and industry.

The BIS's new seismic risk map (2025 Code) places the entire Himalayan zone in the highest-risk category. The Himalayas are more than mountains; they form a high-energy convergent boundary under intense human pressure.

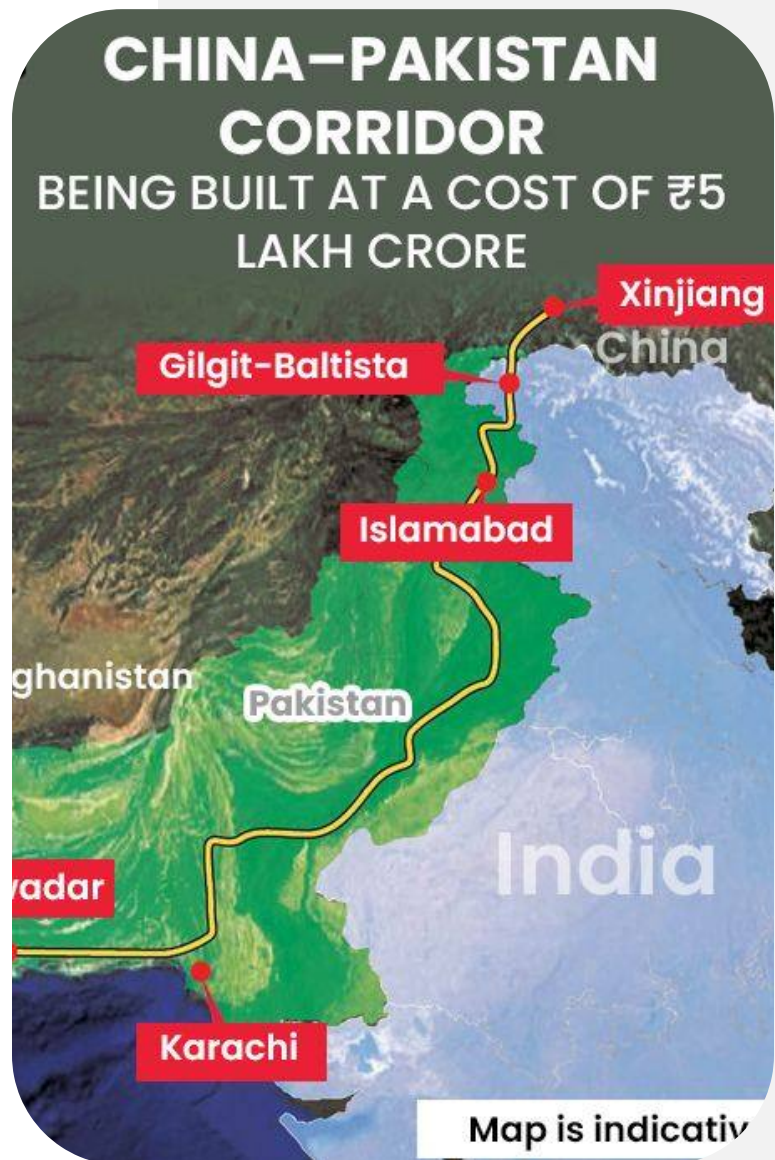

At the same time, the Indian Plate moves northward at 5 cm/year against the Eurasian Plate, causing dangerous elastic strain buildup in the "Central Himalayan Seismic Gap." **200 years back in 1803 , Garhwal Earthquake,** made it to one of the largest Himalayan Earthquakes of the 19th century and is often linked to the release of accumulated stress in the central seismic gap.

This region faces seismic instability, with massive infrastructure projects like dams and roads adding static loads and altering pore pressure, risking "Reservoir-Induced Seismicity".

NASA simulations show a CO₂/CH₄ "Red Zone" over the range, where asphalt construction lowers surface albedo, accelerating glacial melt and releasing ancient methane from permafrost.

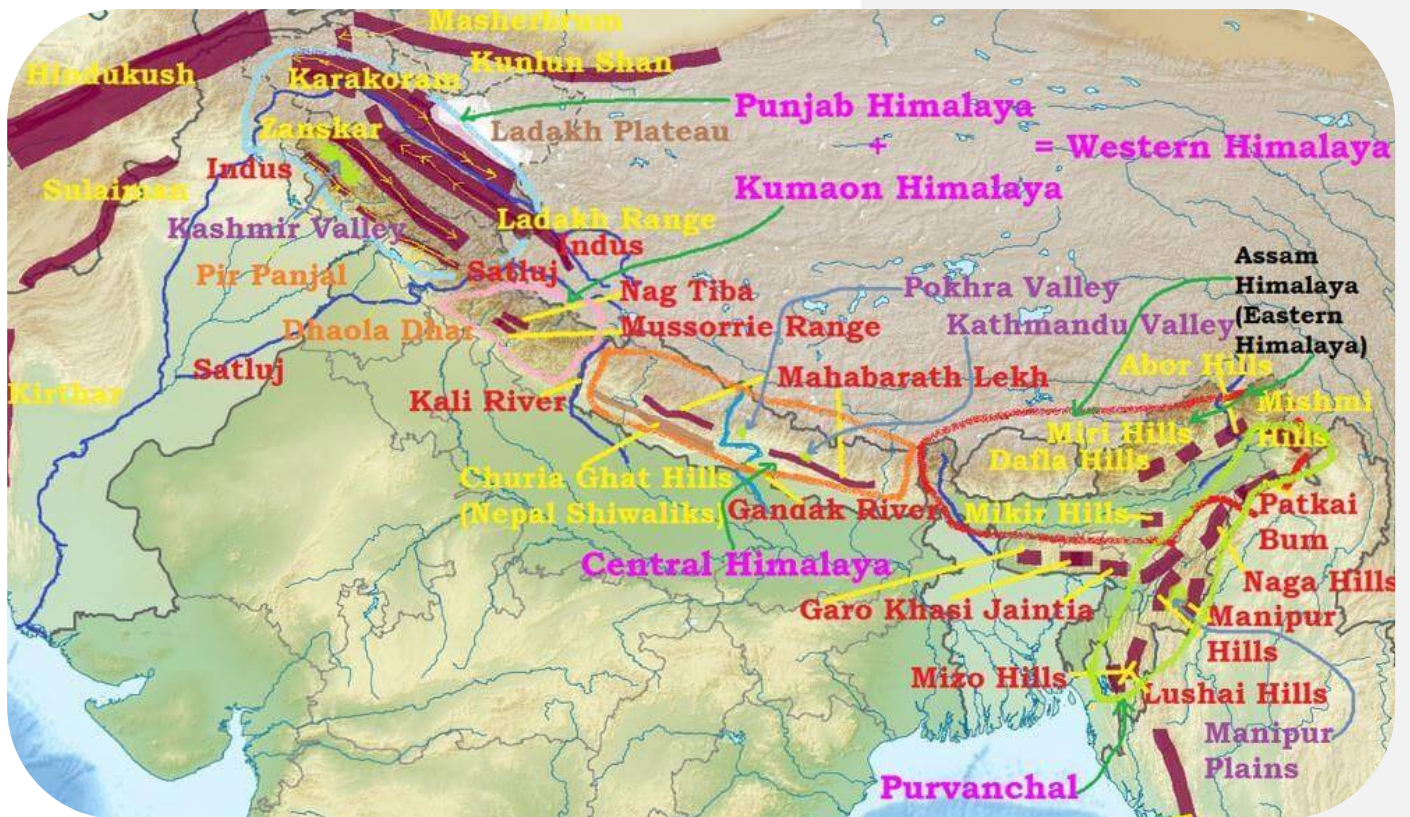

Disrupting this orogenic belt threatens the "Third Pole" and global hydrological balance - **Thus increasing the earth's temp on Himalayas more.**

Rapid industrialization such as activities indicated in the map thus increase the risk in Earth's lithospheric stability for short-term gains.

HIMALAYAN EARTHQUAKE ALERT

The BIS's new seismic risk map (2025 Code) places the entire Himalayan arc, from Arunachal Pradesh to Kashmir, in the highest-risk category. It shows that 61% of India's land falls under moderate to high earthquake risk zones, with the Himalayan belt in Zone VI. This affects 75% of the population, especially in states like Uttarakhand, Himachal Pradesh, and parts of Uttar Pradesh, due to tectonic plate collision and built-up stress. Addressing climate change is crucial for these vulnerable regions.

Our research explored the universe's structure to highlight the Himalaya Range's intricate role in connecting the world visibly and invisibly. This natural link has been broken by world leaders' ego and greed, risking self-destruction. Saving the Himalayas must be the top priority for the Old and New World Orders, including South East Asia and India.

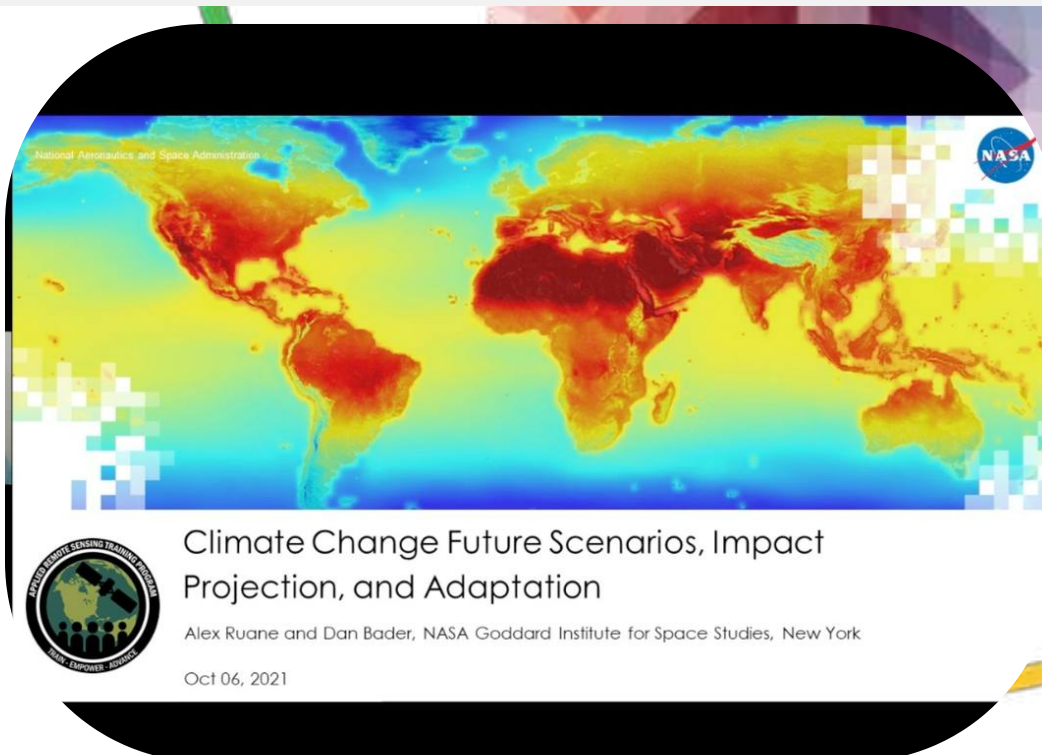

HOW EARTH'S RISING TEMPERATURE / WARMING DIFFERS ON LAND, OCEAN & THE THIRD POLE

Key Insights from the Map

- **Land vs. Ocean Vs. Himalayas Warming:** The map clearly shows land warming much faster and more intensely than oceans. While the global average rise is around 1.5 to 2.0°C, some continental interiors may experience double that. **Notably, the Himalayas are warming much faster than the global average, with high-altitude areas facing even greater temperature rises despite global efforts to limit warming to 1.5°C.**
- **Arctic Amplification:** The Arctic regions turn dark red quickly, illustrating "Arctic Amplification," where melting ice reduces reflectivity, causing more heat absorption.
- **Policy Feedback:** Adjusting sliders for reducing agricultural emissions, waste, increasing carbon prices, electrification, renewables, or deforestation updates the map in real-time. This visualizes how strong actions can shift your region's color from dangerous red to safer orange or yellow.

How to Use It

1. Open En-ROADS at en-roads.org.
2. Select Graphs → Impacts → Temperature Change by Location.
3. Use "Show Baseline" to compare your scenario with "Business as Usual" and see avoided warming.
4. Zoom or search cities like London or New York to view projected temperature rise by 2100

TEMPERATURE CHANGE MAPS BY LOCATION

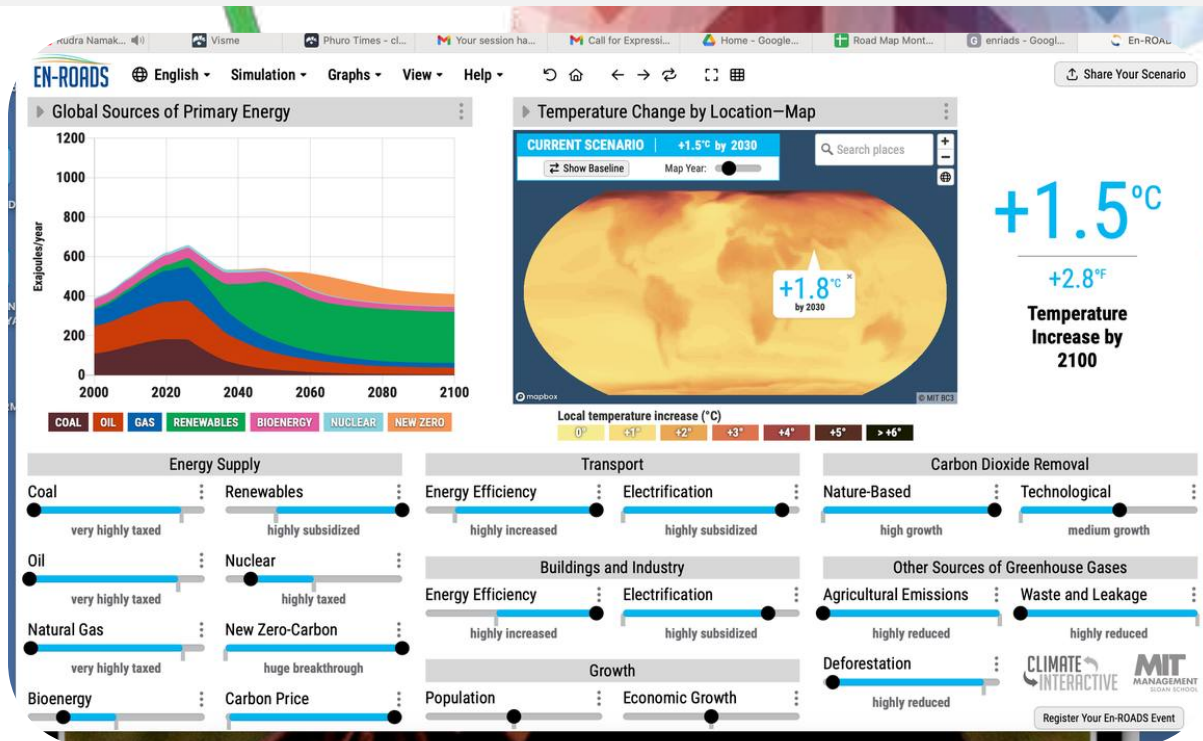

Lets look at the Temperature Change by Location map, developed with MIT’s BC3, it visualizes how global warming affects specific regions like India, China, the USA, Europe, & cities such as New Delhi and New York etc. It shows that climate change is a series of local crises and provides essential data for regional adaptation and equity discussions.

If En-ROADS is the "how-to" manual for fixing the planet— temperature maps;—Phuro Innovations explains that Ecological Peace is the "why."

En-ROADS supports us with algorithms that integrate current data, math, and logic, keeping our concepts relevant and precise.

- Policy Feedback: Adjusting sliders for reducing agricultural emissions, waste, increasing carbon prices, electrification, renewables, or deforestation updates the map in real-time. This visualizes how strong actions can shift your region’s color from dangerous red to safer orange or yellow.

Phuro Innovations is dedicated to advancing research and development by innovating philosophies, solution frameworks, theories, white papers, and newsletters grounded in the latest science. The center plays a key role in enriching literature on World Peace.

BACKGROUND & CONTEXT

2026 started with major challenges, including the **US withdrawing from Paris Agreement & over 65 international organizations /UN entities**. This move ends both participation and funding, putting the US's initial \$2 billion pledge for the UN's humanitarian work, in question. **The full impact is unclear, but** cutting resources amid the UN's liquidity crisis will have serious effects. Amid geopolitical divides and funding shortages, the UN must uphold its Charter, promote peace, and foster unity in this time of division.

The Arctic is becoming crucial for international trade as melting ice opens faster shipping routes, cutting **Asia-Europe transit times nearly in half**. Finland has raised alarms over damage to undersea cables and pipelines, with Chinese ships involved.

China promotes a New World Order, **while Canada and the UK side with China, and France watches closely**. India recently signed a trade deal with the EU after ties with the UK, while the US seems to be stepping back from the current global order. This situation prompts the question of **whether Macron could broker peace amid geopolitical tensions**.

China claims parts of the Himalayas through the China-Pakistan Economic Corridor (CPEC), linking to Gwadar port. The Karakoram Highway revives the ancient Silk Route. China upholds its 1963 boundary deal with Pakistan as valid and its CPEC projects legal. India rejects this, monitoring Chinese activity and signaling possible diplomatic or strategic responses, arguing Pakistan had no right to transfer territory it didn't own.

After considering this information, what role can diplomacy play in resolving these complex international disputes ?

CHINA'S ACCOUNTABILITY

Here we urge China to promote "Ecological Civilization" ? Where China aims not just for economic competition but to reshape the global order by explicitly promising harmony. Will China step up ?

The Communist Party of China (CPC) plays a unique role by centrally planning for carbon peaking by 2030 and neutrality by 2060, putting Asia in a critical dilemma: the region can no longer afford emissions that drive global temperature rises.

RECOMMENDATIONS

Considering China's manufacturing might, China is recommended to create a **"Green Laboratory,"** leading in reducing costs for solar, wind, batteries, and green hydrogen, thus offering tools for "ecological peace" worldwide.

This would replace their rampant carbon producing manufacturing and help the world as well.

Phuro argues that true ecological peace requires the CPC to recognize its **disruption of the "Five Elements of Life,"** moving away from **"growth at any cost" toward harmony with nature.**

Success won't be measured by GDP but by the ability to lead a Global South coalition toward sustainable development without destroying the biosphere.

Regarding the Belt and Road Initiative, Phuro urges China to transform it from a **"carbon corridor" into an "ecological bridge,"** shifting from exporting coal/ oil to sharing green hydrogen and grid technologies with developing nations to reduce emissions rather than just peak them.

Enroads location by maps show that China's policies—especially increased carbon pricing and renewable subsidies—have the greatest impact on cooling the Asia-Pacific region and shifting global warming projections from severe (red) to more manageable (yellow).

CAN FRANCE MEDIATE PEACE?

On World Peace Day 2025, Phuro Innovations in New Delhi hosted a LIVE International meeting using EnRoads science to propose solutions, shared digitally with 400 UN-accredited groups. The focus highlighted China's significant Green House Gas Emissions, supported by data.

Two months later, geopolitical tensions rose as China called for a New World Order, aligning with Canada, UK and seeking France's help. Meanwhile, the US has distanced itself from global environmental efforts by leaving the Paris Agreement and several global organizations.

While China launched its "Beautiful China" project to peak emissions by 2030 - The question arises: On his next visit to India, can Macron act as a modern Mahatma Gandhi to mediate peace between Xi Jinping and Trump's new Board of Peace to reduce emissions and save the Third Pole & the Planet.

SHOULD MACRON MEDIATE PEACE?

CLIMATE Communication

In recent years, global attention on climate change has grown significantly, driving governments, NGOs, and the public to seek practical, cost-effective solutions.

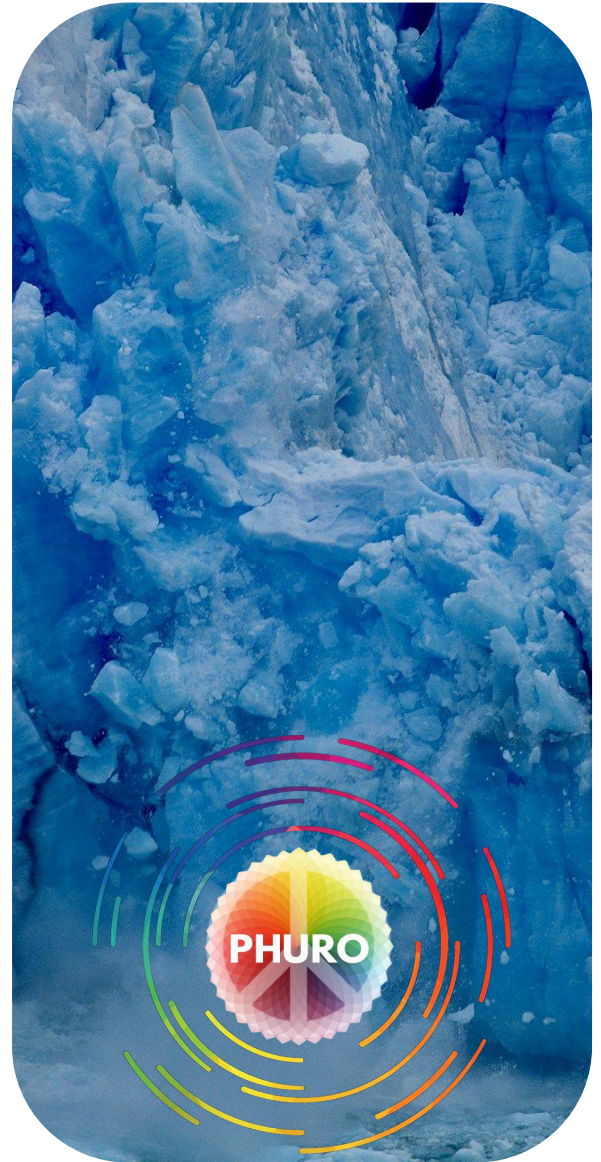

However, effectively communicating the complex and abstract nature of climate change remains a major challenge, limiting public understanding and engagement.

To overcome this, the global Climate Change Information and Research Newsletter—Phuro Times—was established. Phuro Times aims to bridge the communication gap through a four-step process: Research, education, information, awareness and action.

These efforts are vital for improving understanding, active participation and fostering global action towards climate change.

This newsletter HIGHLIGHTS climate solutions using the latest available Maths, Science, Technology and the philosophy of "The Natural Law"—Five Elements of Life - The Shiva Hypothesis
