Page 9-10-11

The planetary heartbeat is entering a state of severe, human-induced arrhythmia (irregular rhythm):

The Muffled Inhalation (The Forest Lung): The Amazon, the Siberian Taiga, and the pristine forests of the Himalayas are no longer able to complete their full respiratory cycle. Deforestation and rising heat mean these carbon sinks are beginning to emit more carbon than they absorb. The lung is scarring.

The Sluggish Pulse (Ocean Circulation): The Atlantic Meridional Overturning Circulation (AMOC)—the great thermal conveyor belt that distributes heat around the globe—is showing critical signs of slowing down.

Just as a weak pulse in a human body leads to systemic organ failure, a stalled ocean current will bring catastrophic, irreversible winter freezes to Europe and dry up monsoon cycles that sustain billions in Asia.

EMBASSY OF NATURE

NATURE / GOD IS SUPREME

The current global leadership has fundamentally violated the Natural Law—the foundational, balancing principles that allow life to persist on this planet. By prioritizing carbon-heavy growth, resource hoarding, and militarized expansion over ecological equilibrium, they have set a trajectory towards an inevitable civilizational collapse.

"To defy the Natural Law is to sign a pact with planetary doom."

The tragedy of this modern legend lies in its asymmetry. The heads of state and the architects of this hyper-industrial greed that will be solely responsible for the collapse. Yet, it is the innocent citizens of the world—who will bear the immediate, catastrophic brunt of the fires, floods, typhoons, tornadoes, earthquakes and systemic displacement; these are those who contributed the least to the carbon ledger, who do not sit in the chambers of global governance.

We are no longer just studying a myth or playing with a symbolic toy. We are living out the climax of the legend. The warning signs are clear, the data is undeniable, and the collective doom of sovereign overreach is no longer a distant prophecy—**IT IS AN UNFOLDING REALITY.**

In Greek mythology, Agamemnon represents the ultimate hubris of a sovereign ruler. He entered the sacred grove (natural sanctuary) of Artemis, killed one of her sacred stags, and arrogantly boasted that he was a far better hunter than the Goddess of the Hunt herself.

By declaring his superiority over the divine guardian of nature, Agamemnon violated the Natural Law. The consequences of his arrogance were swift and devastating, triggering his own doom and suffering for his people:

We have arrived at a terrifying junction in human history. **The race to become an uncontested global superpower is no longer fought merely with diplomacy or conventional arsenals; it is being waged via the systematic exploitation of the Earth's life-support systems.**

The Carbon Ledger: Carbon emissions are the structural footprint of geopolitical greed. The atmosphere has been treated as an open sewer to fund the rise of empires, while the stabilizing systems of our planet—from the polar ice caps to the critical fragile ecosystems of the Third Pole—"Himalayas" are pushed past their tipping points.

NASA

THE SYMBOLISM OF ARTEMIS & ORION

NASA's naming conventions are never arbitrary; they are bridges between our ancestral history and our technological future.

Artemis (The Goddess of the Moon and the Hunt): In Greek mythology, Artemis is the protector of nature, the wilderness, and the young. By naming the mission to return humans to the Moon "Artemis," NASA evokes a guardian spirit. It serves as a reminder that as we reach outward into the cosmos, our primary objective remains the protection of the delicate life systems we carry with us.

Orion (The Hunter): Orion is one of the most recognizable constellations in the night sky, a symbol of exploration, courage, and navigation. Historically, it has served as a guide for travelers across both land and sea. By naming the crew exploration vehicle "Orion," NASA emphasizes that we are using our greatest tools not just for conquest, but for finding our way through the vast unknown.

In comparison

our current trajectory is not merely inefficient; it is a violation of the Natural Law that dictates the survival of all organized systems. To reverse this, we must adopt a new defense strategy—one that integrates ancient philosophical warnings with modern empirical reality.

The Vedic understanding of cosmic cycles (Yugas) predicted time scales that align with the life cycles of stars and galaxies, a reality NASA telescopes now confirm.

When we ignore these warnings, we ignore the historical data of the planet's own resilience. We must treat the Vedas not as folklore, but as a longitudinal data set of the human experience that has accurately predicted the consequences of ecological imbalance.

Just as Agamemnon's violation

into Artemis's sanctuary resulted in the winds dying and the sacrifice of
own legacy, the geopolitical violation of the Third Pole will

dry up the rivers, and bring absolute ruin to

very nations trying to conquer it. In their hubris, they believe they can master the mountains. They believe their sovereign power is greater than the Natural Law of gravity, tectonic pressure, and hydrological cycles.

FINAL CALL - THIRD POLE

The Violation of the Natural Law: Cardiac Arrest at the Third Pole

To understand how the planetary heartbeat is failing, world leaders must look beyond abstract global averages and focus on the Earth's primary circulatory engine: The Third Pole.

Encompassing the Hindu Kush-Himalayan region and the Tibetan Plateau, the Third Pole holds the largest reserve of freshwater ice outside the polar regions. It is not merely a majestic range of mountains; it is the physical heart of the Eastern Hemisphere. Its giant glaciers, snowpacks, and high-altitude lakes function exactly like a planetary ventricle, pumping life-sustaining water through ten of Asia's largest river systems to nourish nearly two billion people.

When we desecrate this region through greenhouse gas emissions, black carbon deposits, and hyper-militarized infrastructure, we are not just causing environmental damage. We are committing a direct, violent Violation of the Natural Law.

The Anatomy of the Pulse: How the Third Pole Pumps Life

In medicine, a healthy heart relies on a flawless cycle of filling and pumping—diastole and systole. The Third Pole operates on an identical biophysical rhythm:

DELICATE CARDIAC SYSTEM OF THE PLANET

HOW DOES IT WORK

The Accumulation (Diastole): During the cold seasons, the high-altitude peaks capture winter precipitation, freezing it into massive glacial reservoirs. This is the planet storing its vital fluid.

The Release (Systole): As spring and summer arrive, the glaciers melt gradually, releasing a steady, predictable pulse of freshwater. This runoff feeds the Indus, Ganges, Brahmaputra, Yangtze, and Mekong rivers, driving agricultural cycles, supporting biodiversity, and stabilizing regional climates.

This seasonal oscillation is a fundamental Natural Law—a balancing mechanism that has run uninterrupted for millennia.

The Violation: Overdriving the Pump

Today, the major powers surrounding the Third Pole—driven by geopolitical rivalry, resource greed, and a desperate race for energy dominance—are forcing this delicate cardiac system into a state of fatal hyper-ventilation.

The Black Carbon Clot: Coal-fired power plants and heavy industries in the surrounding subcontinents release massive plumes of soot (black carbon). These dark particles settle on the pristine white snow of the Himalayas, absorbing solar radiation and accelerating the melt.

It acts exactly like an arterial plaque, choking off the mountain's ability to reflect sunlight and maintain its cooling function.

A CALL TO CIVIC LEADERSHIP

KNOWLEDGE FOR ACTION

WARNING - END THE DENIAL

To the leaders who view the environment as an externality to be managed on a balance sheet: your model is obsolete. The data from CERN, NASA to our last press release on "Save the Third Pole - Himalayas" confirms that the natural world reacts to human intervention with precise, catastrophic consequences.

The warning in our legends—that the Earth is a living, breathing entity that will shed those who abuse it—is no longer a metaphor. It is a scientific reality. We are witnessing the planet's immune response to human activity. NASA Is confirming that with Earths Heart Beat Satellite Imageries, Frequencies and Vibrations, if that's the language which you will respond to.

The time for incremental policy has passed. The Earth does not negotiate with those who ignore the laws of its survival.

We must align our global governance with the reality that we are guests on a living, conscious, and increasingly fragile home.

If we fail to recognize this, the planet's "failing heartbeat" will eventually force a correction that humanity cannot withstand. We may have to built the Ship like the Noha's Ark it's a stark reality now.

Inspired by CERN & NASA's latest findings, we explore the philosophy behind Artemis and Orion—and what these missions teach us about saving our own home.

The data is clear: while global temperatures rise, regional action can turn the tide.

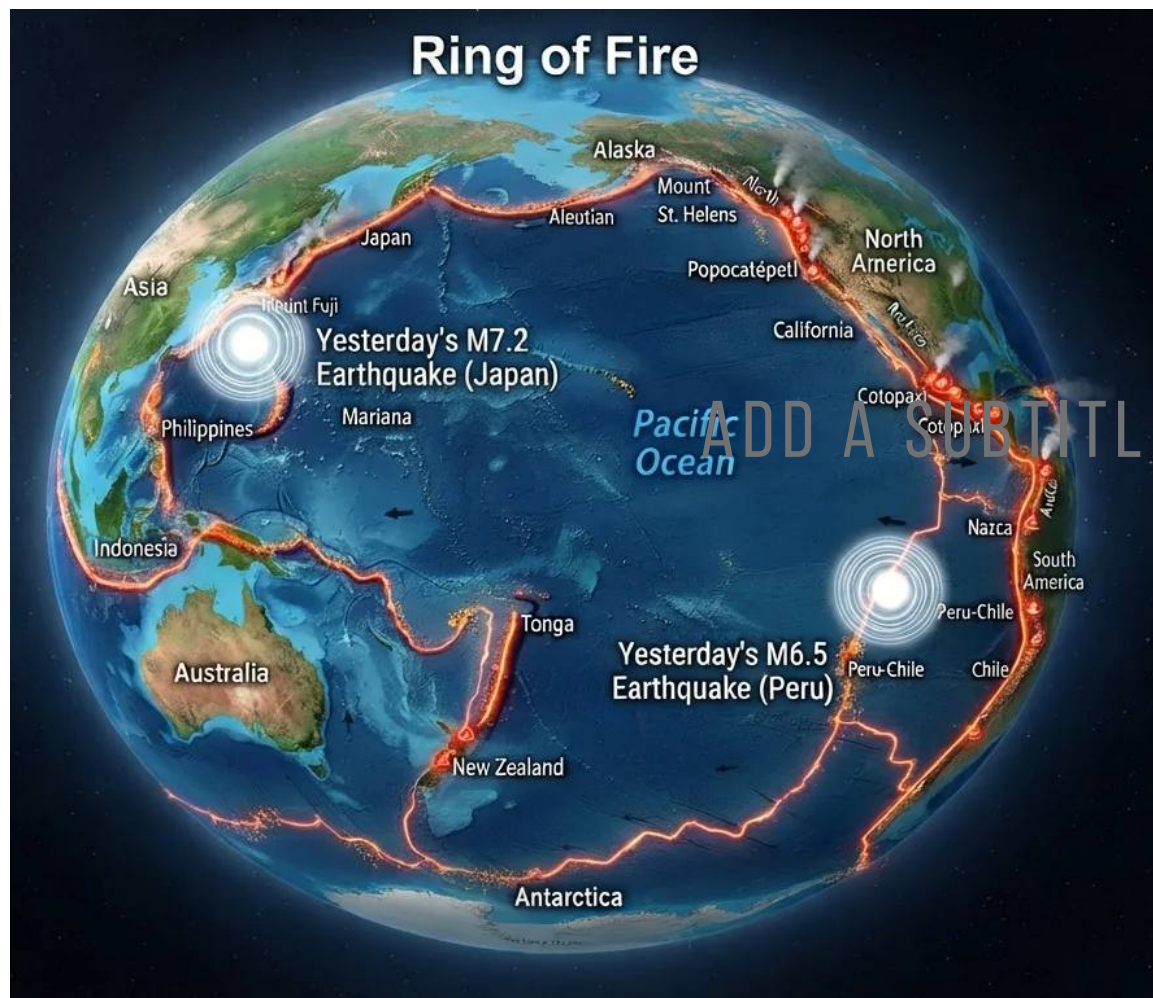

As we track Earth's heartbeat, we are forced to confront the crisis flowing through her veins: vital river systems poisoned by toxins, threatened by nuclear waste, and choked by heat. It's time to protect the planet's true lifelines.

RING OF FIRE

ULTIMAATE TEST

The collapse of the Third Pole's natural cycle is the ultimate test of global governance. No single country can wall itself off from a drying continent. It proves that the "Violation of Natural Law" by one superpower eventually destroys the ground upon which all of them stand.

AS OF JULY 15, 2026, NORTHWESTERN ONTARIO IS FACING A SIGNIFICANT WILDFIRE EMERGENCY CHARACTERIZED BY RAPIDLY CHANGING CONDITIONS AND MULTIPLE EVACUATIONS.

THE PACIFIC RING OF FIRE ACCOUNTS FOR ROUGHLY 85–90% OF THE WORLD'S EARTHQUAKES. THIS DYNAMIC BOUNDARY GENERATES ROUGHLY 90% OF THE WORLD'S EARTHQUAKES AND HOUSES 75% OF EARTH'S ACTIVE VOLCANOES. EARTHQUAKES AND VOLCANIC ERUPTIONS AREN'T GETTING BIGGER OR MORE FREQUENT, BUT HUMAN POPULATIONS NEAR FAULT LINES ARE GROWING. AN ERUPTION THAT WOULD HAVE HARMED NO ONE 200 YEARS AGO NOW THREATENS NEARBY CITIES, INFRASTRUCTURE, AND FLIGHT PATHS—MAKING THE IMPACT BIGGER AND MORE NEWS-WORTHY.

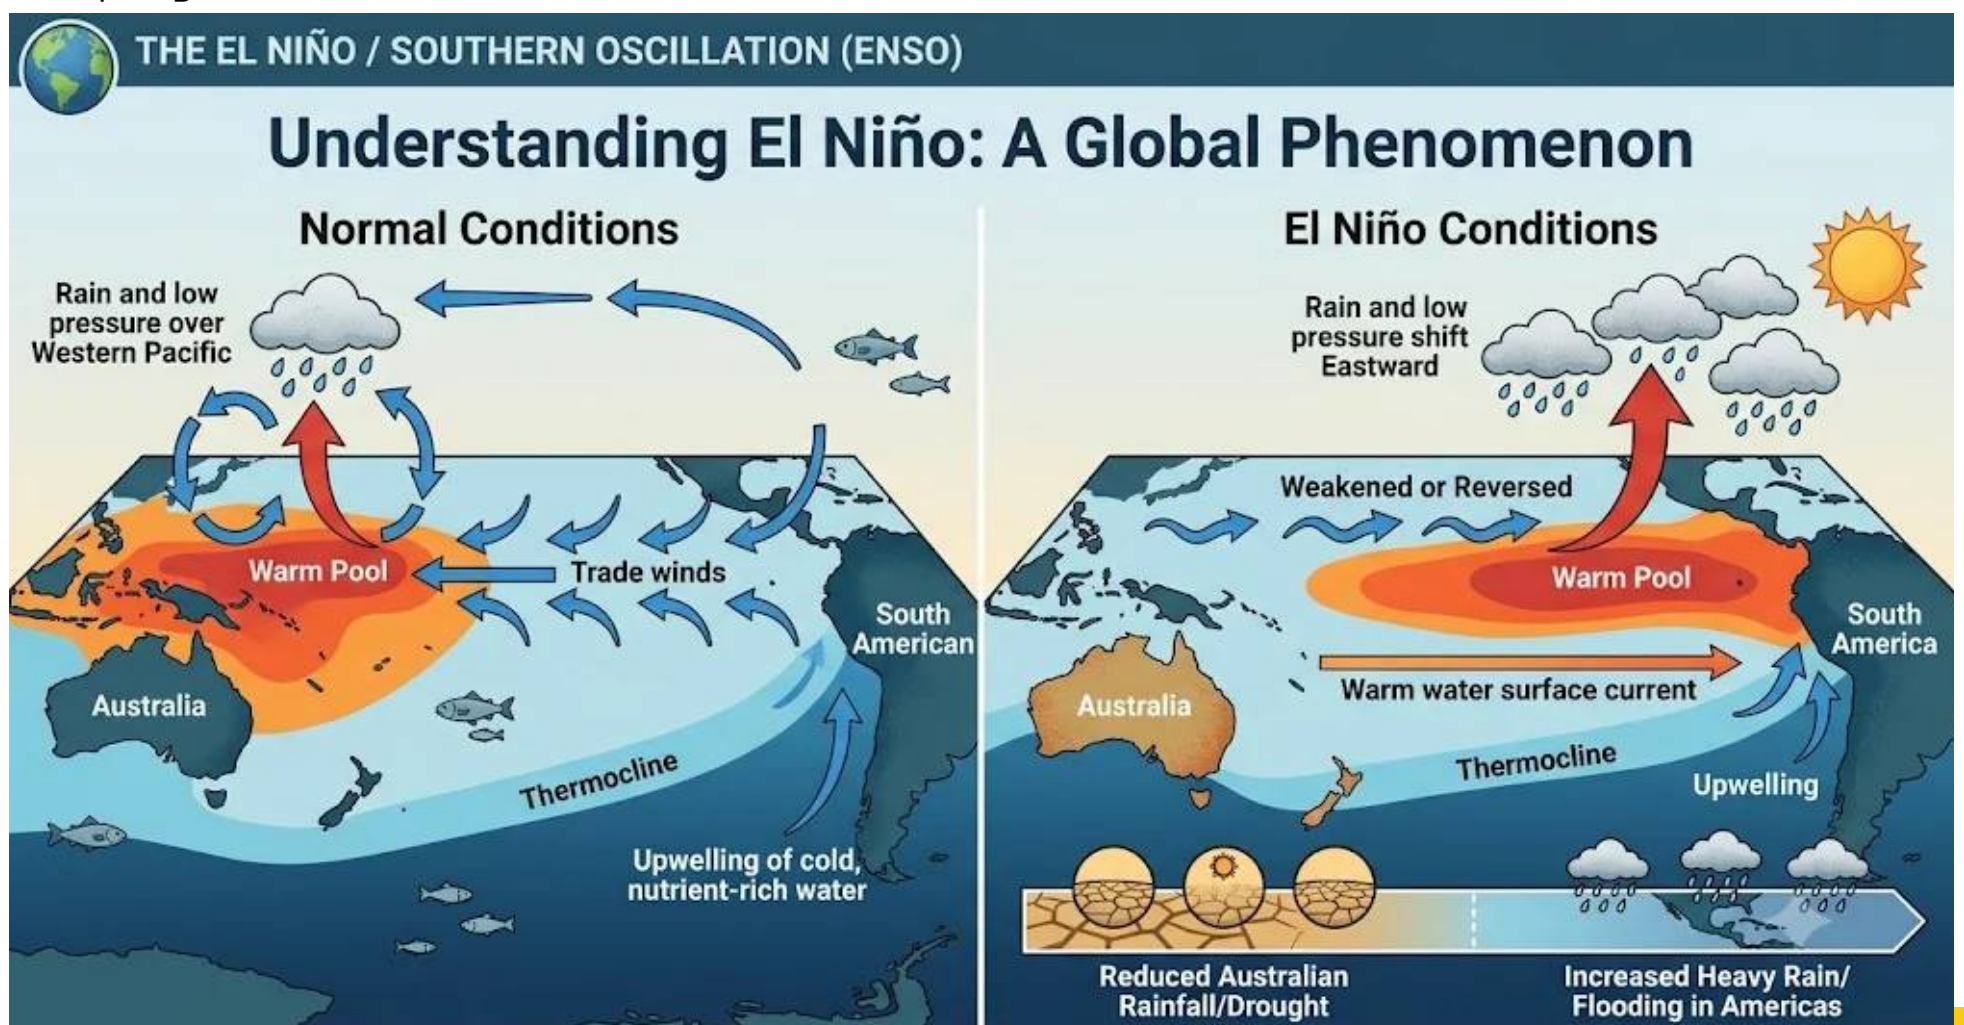

IT IS TIME FOR LEADERS TO STEP OUT OF THE SANCTUARY, LAY DOWN THEIR WEAPONS OF GREED, AND BOW TO THE NATURAL LAWS THAT KEEP US ALL ALIVE.

WITH GLOBAL TEMPERATURES RISING, SOLAR PANELS ARE FACING NEW SAFETY RISKS. SEVERE HEAT COMBINED WITH DRY ATMOSPHERIC WINDS INCREASES THE LIKELIHOOD OF PANEL FIRES, CREATING A GROWING HAZARD FOR PUBLIC HEALTH AND SAFETY. PANEL FIRES ARE USUALLY TRIGGERED BY "THERMAL STRESS" OR "ELECTRICAL FAULTS UNDER HEAT"

A new El Niño event developed in mid-2026 and is intensifying rapidly.

Climate agencies like NOAA and the World Meteorological Organization (WMO) report that sea surface temperatures in the equatorial Pacific Ocean have spiked significantly. Forecasting models currently indicate a very high probability (over 80%) that this event will reach **"very strong" status—potentially qualifying as another Super El Niño.**

- **Peak Window:** The event is expected to peak between late autumn 2026 and early winter 2027.
- **Persistence:** Forecasts project high confidence that El Niño conditions will remain active into early spring 2027.

Major Historical Super El Niño Events

Only a few official Super El Niño events have been recorded in modern history, occurring roughly once every 15–20 years:

- **1982–1983:** Caused severe floods in South America and intense droughts in Australia and Indonesia.
- **1997–1998:** The most intense on record at the time, responsible for record-breaking global ocean temperatures, severe coral bleaching, and billions in damages worldwide.
- **2015–2016:** Tied with 1997–1998 for intensity, driving 2016 to become one of the hottest years in recorded history and triggering widespread coral die-offs across the Great Barrier Reef.
- **2023–2024:** A very strong event that combined with underlying climate warming to drive unprecedented global monthly temperature records.

WHEN A SUPER EL NIÑO HITS, IT FUNDAMENTALLY ALTERS GLOBAL RAINFALL PATTERNS. IN SOUTH ASIA AND PARTS OF SOUTHEAST ASIA, IT TYPICALLY CAUSES DELAYED OR WEAKENED MONSOONS, LEADING TO INTENSE HEATWAVES AND SEVERE DROUGHTS.

SUPER EL NIÑO DIRECTLY HITS MAJOR AGRICULTURAL ZONES IN INDIA, THAILAND, VIETNAM, AND INDONESIA. THESE REGIONS PRODUCE THE VAST MAJORITY OF THE WORLD'S RICE, PALM OIL, AND SUGAR, AS WELL AS CRUCIAL DOMESTIC STAPLES LIKE WHEAT, PULSES, AND VEGETABLES.

Recent data and major assessment reports published in 2026 detail the intensifying toll of climate change across economic, agricultural, and human sectors.

1. Agricultural Output & Food Security

The emergence of an historically severe, "super" El Niño cycle in the middle of 2026 has compounded global warming baselines, creating massive shocks in agricultural production SOURCE - The Guardian

Lost Production Value: Economic forecasts from institutional analysts indicate that the current cycle threatens a 14.3% hit to global agricultural production, which equates to roughly \$342 billion in lost output.

Commodity Prices

are heavily impacting core global yields. For example, severe drought in Southeast Asia has disrupted palm oil supplies, while delayed or heavily reduced monsoons in Central India (dropping rainfall by up to 50% to 75% in some regions) threaten wheat, sugarcane, and rice harvests.

2. Global Economic & Infrastructure Losses

A comprehensive 2026 systemic risk report by CDP (Carbon Disclosure Project) highlights that extreme weather has moved from a future threat to an active, material macroeconomic risk.

Projected Corporate Impacts: Companies globally anticipate over \$714 billion in near-term financial impacts due to climate hazards.

Primary Drivers: The largest chunks of these economic losses stem from flooding (\$389 billion), cyclones (\$126 billion), and heavy rainfall (\$82 billion).

Systemic Strains: Rather than hitting isolated assets, these costs are heavily driven by reduced industrial production capacity (\$326 billion) and early asset impairment or retirement (\$122 billion) as infrastructure, supply chains, and public utilities buckle.

**KNOWLEDGE
FOR
ACTION**

**FOUNDERS
REMARKS**

3. Human Casualties & Heat Stress

Extremely intense, early-season "heat domes" across the Northern Hemisphere in mid-2026 have directly resulted in immediate human and public health costs.

Surging Heat Mortality: Rapid attribution studies underscore how human-driven climate change is actively swelling death tolls. For instance, a joint 2026 study by Imperial College London and the Met Office found that record-breaking heatwaves in May and June alone caused at least 2,700 excess heat-related deaths in England and Wales, with more than two-fifths directly attributable to global warming. source - theecologist.org

Labor and Energy Pressures: Across intensely hit areas like northern India, extreme temperatures during the pre-monsoon period forced school closures, heavily curtailed construction and outdoor labor productivity, and drove national electricity demand to record-shattering peaks (above 270 GW), exposing severe strain on electrical grids. www.hindustantimes.com

The Big Picture: A Super El Niño isn't just an environmental event—it acts as an economic shockwave that turns atmospheric warming in the Pacific Ocean into higher grocery bills and trade disputes across the globe.

GLOBAL CLIMATE DISASTERS IN 2024: CAUSE AND EFFECT.

Harvard Alumni Entrepreneurs
2019 - 2023
Chairperson & Co Chair India

As a founding member & Chairperson I was responsible to set up the Organization to promote innovation by advancing Entrepreneurship in India, during my term we received from Harvard University, President Bacov's prestigious award as "Outstanding Community" amongst all Harvard's clubs & S/G's

Office of the Member of Parliament Lok Sabha
2018 - 2019

As a case study on the Indian Political System and its on ground impact we explore potential areas for overall development and cooperation in the long term. Understanding the dynamics of the system can shed light on key opportunities for progress and collaboration.

Gift Foundation
Member of board of Advisors
2015- 2018

For over 60 years, Mr. Sam Beard has advised eight US Presidents, including Nixon, Reagan, Kennedy, and Bush. The experience focused on understanding how to advise leaders in sensitive positions, like heads of state, where every policy carries weight. It delves into how advisors play a pivotal role in shaping nations. Understanding these dynamics sheds light on the intricate interplay between leadership, policy, and societal progress.

Some of my work - Year 2023

As a part of further studies of Ecological Peace, here Rachna Sharma draws a forecasted plan that can be implemented in phases, leading to testing Green Hydrogen in New Delhi, reducing its Hazardous AQI levels which are becoming inhabitable for its citizens. As a supporting formal documentation, filed an appeal / complaint with the First Citizens, President of India, Post which this solution document was also shared with national leaders, Declaring this as public emergency and requesting them to make this as a political agenda
